

Screened platform applications — exact links & realistic chances

Prepared 20 Aug 2026 for Dr. Aman Khanna (orthopaedic surgeon, Surat; MBBS/MS; journal editor; postgraduate statistics). Every platform below passed the India-eligibility screen from the verified research (reports/platform-eligibility-verified.md). DataAnnotation and Handshake AI are excluded — verified NOT open to India-based physicians. Links captured 20 Aug 2026; listings rotate, so if a link is dead, start from the platform link beside it.

How to read the chance estimates: these are reasoned estimates (INFERENCE), not published acceptance rates — platforms do not publish them. They assume you apply this week, attempt every assessment seriously, and use the credential line on every profile. Two numbers matter per platform: getting **accepted**, and acceptance turning into **paid hours** — the second is the real hurdle.

1. Mercor — Healthcare Expert, International Physicians (APPLY FIRST)

Screen verdict	PASS — the one track built for non-US physicians. Skip Mercor's specialty listings (cardiology etc., \$180–400/h): those verifiably require active US/Canada practice.
Apply at	work.mercor.com — Healthcare Expert: International Physicians work.mercor.com — Physician Talent Network (apply-once pool) mercortalent.com/experts/healthcare (hub)
Requirements	MD/MBBS or equivalent; active licence; 5+ years clinical experience. Process: profile + resume, written work sample, 15-min recorded AI video interview (6–8 questions, 3 attempts). Pays India via Stripe.
Rate evidence	Healthcare band advertised \$50–180/h; international-track rate not published — confirm at onboarding before committing hours.
Your chances	Acceptance into the network: MODERATE, est. 30–50%. Paid project hours within 90 days: est. 30–45%.
Why	Your credentials are unusually strong for this pool (surgeon + editor + statistician vs the average applicant MD), which helps screening; the uncertainty is project allocation, which depends on client demand for your specialty in any given month — outside your control.

2. Meridial (Invisible Technologies) (APPLY SAME DAY)

Screen verdict	PASS — India explicitly listed in eligible regions (US/CA/UK/EU/MX/BR/IN/JP/KR/SG).
Apply at	meridial.ai/projects
Requirements	Domain-expert application; invitations reviewed within ~48 h of applying.
Rate evidence	Domain experts \$35–125/h (verified third-party reporting).
Your chances	Acceptance: MODERATE–HIGH, est. 40–60%. Paid hours within 90 days: est. 30–50%.
Why	Explicit India eligibility removes the biggest filter; healthcare is a listed domain. Volume is project-driven and bursty, so expect gaps between projects.

3. Mindrift (Toloka)

Screen verdict	PASS — join from any country; medicine is a listed domain.
Apply at	mindrift.ai/welcome
Requirements	Freelance contributor sign-up; no licence gate for most medical-content tasks.
Rate evidence	\$20–60/h — the low end can fall below your Rs 4,000/h kill floor; track from hour one.

Your chances	Acceptance: HIGH, est. 70–85%. Clearing your Rs 4k/h floor: est. 40–60%.
Why	Lowest entry bar of the set, which is exactly why rates are lower. Treat as volume filler while Mercor/Meridial cook — drop at the 60-day review if the effective rate is below floor.

4. Alignerr (Labelbox)

Screen verdict	PASS with the listing screen — India is in the platform's 14-country set, but individual physician listings are often client-restricted to US-practising MDs (you confirmed one such listing yourself). Apply ONLY to listings whose requirement reads 'MD/MBBS or equivalent' or names no country; skip anything saying US-licensed / board-certified.
Apply at	alignerr.com (profile sign-up) alignerr.com/process (how vetting works)
Requirements	Profile + vetting; per-listing requirements vary by client.
Rate evidence	\$30–100/h reported, varies by project.
Your chances	Profile acceptance: MODERATE, est. 30–50%. Paid MEDICAL work from India: LOW–MODERATE, est. 15–30%.
Why	The platform is open; the medical listings often are not. Ortho-specific, India-eligible listings will be rare — check weekly, apply in minutes when one appears, and let the profile sit otherwise.

5. micro1 (your bilingual edge)

Screen verdict	PASS (likely) — healthcare/medical domain live with postings; country set not published. The 'Bilingual Medical Expert' style postings are where being an Indian physician is an advantage, not a filter: Hindi/Gujarati + English medical evaluation is work US doctors cannot do.
Apply at	micro1.ai/experts (general application) jobs.micro1.ai — Bilingual Medical Expert (example posting; may rotate)
Requirements	AI-interview-based vetting; per-posting requirements.
Rate evidence	\$20–65/h evaluator band; physician feedback reports wide variance.
Your chances	Acceptance: MODERATE, est. 30–50% (higher on bilingual postings). Paid hours: est. 25–40%.
Why	State Hindi + Gujarati + English capability explicitly on the profile — on bilingual postings it converts your location from a discount into a differentiator.

6. Outlier (Scale AI) (low priority)

Screen verdict	MARGINAL PASS — India is live (~50 countries) but task volume is prioritised to US/UK/Germany and clients can restrict projects by country. VPN use = instant ban. The radiology expert track's marketing does not promise India availability.
Apply at	outlier.ai (sign-up) outlier.ai/experts/radiology (specialty track — check India availability in-app)
Requirements	ID + location verification at onboarding; per-project country gates.
Rate evidence	\$15–50/h generalist; specialty higher where offered — much of it below your floor.
Your chances	Acceptance: MODERATE–HIGH. Meaningful income from India: LOW, est. 10–20%.
Why	Thin India task flow is the verified reality. Apply on Day 2 only because it costs 20 minutes; expect little and let it surprise you.

7. OpenTrain (aggregator — not a platform)

Screen verdict	PASS — use as your Monday-scan radar, filtering India-eligible medicine postings across platforms.
Apply at	opentrain.ai/ai-training-careers/medicine
Requirements	Profile + alerts; each posting carries its own requirements (apply the same listing screen).
Rate evidence	Clinical postings listed at \$25–100/h.
Your chances	N/A — it feeds applications rather than paying directly.
Why	This is the 30-minute Monday habit in the C4 cadence: scan, shortlist, apply Wednesday.

The overall arithmetic — honest

Applying to all six platforms this week, with assessments done seriously: the chance that **at least one** is paying you by day 60–90 is HIGH — est. 70–85% (independent shots at 6 targets, even at 30–50% each, rarely all miss). The chance of reaching the full platform row in your C8 plan (Rs 1.2–1.8L/month by month 6) is est. 40–50% — it needs two platforms paying concurrently at the physician band, and project supply is the variable you don't control. This is exactly why the plan's anchor is direct consulting (the 8 pitches already sent), not platforms.

What moves your odds up (in your control)

1. **Assessment quality beats credentials.** Platforms accept the people whose written justifications are precise — write like your hallucination-audit portfolio piece, not like a textbook.
2. **One consistent credential line everywhere:** practising orthopaedic surgeon (arthroscopy, arthroplasty) · international journal editor · postgraduate-trained statistician.
3. **Do assessments the same day you apply** — acceptance lags 2–8 weeks; every day of delay is a day of that fuse unlit.
4. **Declare bilingual capability** (Hindi/Gujarati) on every profile.
5. **Never use a VPN**, never inflate credentials, use a dedicated device profile for time-tracked work — one integrity flag ends a platform relationship permanently.

All chance figures on this page are reasoned estimates (INFERENCE) from verified rate/eligibility research dated 20 Aug 2026 — platforms do not publish acceptance rates. Sources: orthoos-v2/reports/platform-eligibility-verified.md and deep-dive-ai-income-streams.md in the repo.
